

International Growth Fund

Management Team

Aziz Hamzaogullari, CFA

Objective

Seeks long-term growth of capital

Benchmark

MSCI ACWI ex USA Index (Net)

Highlights

- Active management with a long-term, private equity approach to investing
- Seven-step research framework focuses on quality, growth and valuation
- High-conviction portfolio of typically 30 to 45 stocks
- Low turnover: 0-25% annualized
- High active share: typically greater than 90%*
- Top 10 holdings: typically 40% - 50%
- Up to 20% holdings to US companies
- Looks to identify high-quality companies – those with difficult-to-replicate business models
- Team must view cash flow growth as sustainable and profitable
- Stock values are modeled and regularly updated based on our four valuation scenarios: Best, Base, Bear and Worst
- Seeks to create a margin of safety by investing only when the company is selling meaningfully below the team's estimate of intrinsic value
- Active risk management defines risk as a permanent loss of capital, not tracking error or short-term relative underperformance
- Bottom-up stock selection drives excess returns

The MSCI ACWI ex USA Index (Net) is a free float-adjusted market capitalization index that is designed to measure equity market performance in the global developed (excluding the USA) and emerging markets. The index is shown with minimum dividend reinvested after deduction of withholding tax. Indexes are unmanaged and do not incur fees. It is not possible to invest directly in an index.

The Fund's composition statistics are from the adviser's internal system and may not match the fund's regulatory documents. Due to rounding, Market Capitalization and Sector Distribution totals may not equal 100%. This Fund is actively managed and characteristics are subject to change. Top 10 Holdings may combine more than one security from the same issuer and related depository receipts. Fund weight calculations include accrued interest. Holdings are based on total gross assets before any fees are paid; any cash held is included. Reference to specific securities or holdings should not be considered recommendations for action by investors. There is no guarantee the fund continues to invest in the securities referenced. Cash may include unsettled trades, fees and/or derivatives.

P/E (forward) measures price-to-earnings ratio using forecasted earnings for the price-to-earnings calculation; the forward measure is not a forecast of the fund's performance. P/E (trailing) is the sum of a company's price-to-earnings, calculated by dividing current stock price by trailing earnings per share for the past 12 months. 3-5 Year EPS Growth is sourced from FactSet and based on long-term EPS growth rate estimates gathered directly from brokers. The portfolio and benchmark statistic is a weighted average of company level estimates. 3-yr Historical EPS is the average earnings per share value that the company reports quarterly over the trailing 3-year term, calculated by dividing earnings available to shareholders by total number of shares outstanding. 5-yr Historical EPS is the average earnings per share value that the company reports quarterly over the trailing 5-year term, calculated by dividing earnings available to shareholders by total number of shares outstanding. Return on Equity (ROE) measures a company's profitability and reveals how much profit a company generates with money shareholders invested. ROE is calculated by dividing net income by shareholder equity. ROE (1-year equal wtd) is the 1-year ROE of all holdings divided by number of holdings. Price/Cash Flow compares the price of a company's stock relative to how much cash flow the firm is generating, calculated by dividing the current market price of the share by the cash flow per share. Price/Book is a ratio that compares a stock's market value to its book value calculated by dividing current closing price of the stock by the latest quarter's book value per share. Debt-to-capital provides a measure of how much debt the company has on its books calculated by total company debt divided by total capitalization of the company. Median Market Cap is the midpoint of market capitalization (market price multiplied by number of shares outstanding) of stocks in a portfolio. Median Active Share (since inception) indicates the proportion of the portfolio's holdings (by market value) that is different than the benchmark. A higher active share indicates a larger difference between the benchmark and the portfolio.
